CRANES

KENZ OFFSHORE CRANES PRODUCT RANGE

Kenz has provided more than 300 pedestal mounted cranes for all kinds of offshore structures and vessels for over 50 years. Serving clients all over the world, our product portfolio adds value to their operations, with equipment ranging from 2.5t - 800t SWL.

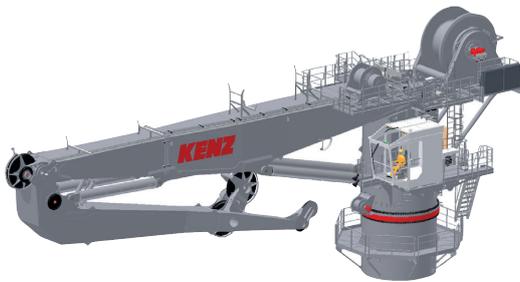

**A TRUSTED PARTNER IN THE
OFFSHORE INDUSTRY**

WWW.KENZ-FIGEE.COM

We understand that clients needs vary, for example in terms of lead times, working depth and hoisting capacity. Therefore, we have a diverse product portfolio of both standard and custom built equipment.

KNUCKLE BOOM CRANE

Boom length from 18m to 45m* | Max. capacity 250t*

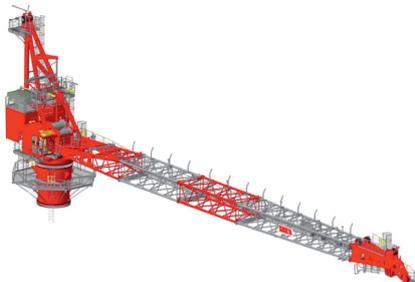

Based on a proven design, the Kenz Knuckle Boom crane is easy to customize in order to fit client requirements. As opposed to its contemporaries, our design has the main hoist rope running underneath the knuckle. With its "easy to re-reeve" main boom lift, the hoist rope can be placed over the main boom to handle taller and heavier loads. In addition to this, the main hoist winch can be placed below the deck (also at a later stage) which facilitates deeper operations and better vessel stability.

Kenz cranes can be supplied in accordance with all international standards and are certified by all recognized authorities.

BOOM HOIST CRANE

Boom length from 35m to 90m* | Max. capacity 800t*

Kenz Boom Hoist Cranes have a lattice type boom and make use of winches to perform the luffing action. The lightweight design makes these cranes well suited to operations that require high load-radius combinations.

RAM LUFFING CRANE

Boom length from 20m to 50m* | Max. capacity 250t*

Making use of hydraulic cylinders to perform the luffing action, the Kenz Ram Luffing crane is the ideal design for harsh offshore environments. With its compact and robust design, this crane type is ideal for offshore installations and vessels of all types. The limited number of moving parts on these cranes means that they are highly reliable and require limited maintenance.
